

SYNTHETIC GRASS CARE INSTRUCTIONS

REMOVE DEBRIS: Gently broom, rake or use a blower on your grass to remove leaves and twigs and prevent the build-up of dust and dirt, ensuring that you don't remove the sand in the process.

HOSE DOWN YOUR GRASS: This will keep your grass clean, improve the drainage properties and cool the grass down in hot weather. The grass can get a little slippery when wet so exercise caution.

CLEAN UP AFTER YOUR PETS: Pick up and dispose of any animal droppings. You can use a solution of 1 part chlorine to 20 parts water to remove any odours caused by your pets.

HOSE OFF OR WIPE UP SPILLS: Most spills can be hosed off, but sugary or greasy food and sugary drinks might need to be wiped up with warm soapy water and gently hosed off.

KEEP PETROL AND HOT OBJECTS AWAY: Petrol, sparks and hot coals can damage your grass so keep them well away.

DON'T DRIVE HEAVY MACHINERY OR VEHICLES ON YOUR GRASS: Heavy machinery or vehicles can displace and stretch your grass.

CHECK FOR MOULD: If wet debris forms a skin on the grass it can become prone to mould or algae. Treat the grass with a mould or algae killer then remove any residue with a rake and broom.

CHECK THE SAND LEVEL: Over time, the sand infill can become uneven or low. Let us know if your grass needs a refill of sand or a power broom to get it back to its original condition.

WEEDS: Sometimes weeds can encroach on your grass. Check regularly and weed by hand or use a domestic weed killer, then remove any residue with a rake and broom.

PLEASE DON'T HESITATE TO GIVE US A CALL IF YOU HAVE ANY CONCERNS REGARDING THE MAINTENANCE OF YOUR
